

local server & network

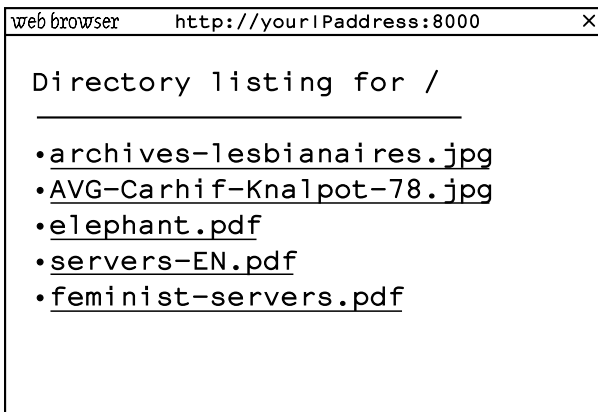

on a computer create a folder with documents in it, or an html website for instance

open the computer's terminal and go in your folder

type:

```
terminal
computername:~$
                    cd folder/path
computername:~/folder/path$
type:
                    cd folder/path
```

type:

↪ serving!

the local server will be accessible only by devices connected to the same wifi, through the browser, at the address:

`http://yourIPaddress:8000`

to know your IP address, open a new terminal tab

type:

```
terminal
computername:~$
                    ifconfig
computername:~$
look for:          inet 192.168.1.9
```

the content will be served here:

`http://192.168.1.9:8000`
